Educational Organising using ServiceNow - Sample Code

```python
# Educational Organising using ServiceNow - Python Script Example

# This is a pseudo-code example for integrating educational organizing logic with
ServiceNow API

import requests

# Set your ServiceNow instance and credentials
instance = "https://yourinstance.service-now.com"
user = "your_username"
password = "your_password"

# Define the headers for JSON API
headers = {
    "Content-Type": "application/json",
    "Accept": "application/json"
}

# Sample function to create an educational task
def create_educational_task(student_name, subject, description):
    url = f"{instance}/api/now/table/task"
    payload = {
        "short_description": f"Session for {student_name} on {subject}",
        "description": description,
        "category": "education"
    }
    response = requests.post(url, auth=(user, password), headers=headers, json=payload)
    return response.json()

# Sample call
if __name__ == "__main__":
    result = create_educational_task("Aarav", "Mathematics", "Create learning path for
algebra basics.")
    print(result)
```
